## WELCOME

Welcome to another exciting edition of World Wide Birds!

Before we dive into this month's articles, I would like to extend a heartfelt thank you to two wonderful supporters who have helped make a difference to our ongoing garden biodiversity project.

A special thank you to Dr Barton Huber from Animal Medical Center of Corona for his generous donation through Buy Me a Coffee, and to Eva Kline for subscribing through our Red Friday Special.

Your support came at just the right time! It enabled me to complete my second pallet project by purchasing the potting soil needed and planting a fig tree.

Every completed project brings us one step closer to creating a more welcoming environment for birds and other wildlife. It is wonderful to see how even relatively small contributions can turn into something tangible that benefits nature.

Would you also like to help us make a difference?

Every contribution helps us purchase indigenous plants, flowers, bird food, nesting materials and other essentials for our ongoing biodiversity projects.

Support our projects through Buy Me a Coffee:

https://buymeacoffee.com/petrusvantonder

You can also keep an eye on our website for our special Premier Magazine daily subscription offers. These specials are not always available, so remember to check back regularly to see what is on offer!

Discover our daily specials here:
https://www.wwbirds.co.za/dir/world-wide-birds-special-of-the-day/

Remember, these special subscriptions include all the usual Premier benefits while helping us continue our work for birds and biodiversity.

WHAT'S INSIDE THE NOVEMBER PREMIER EDITION?

We have another exciting selection of articles lined up for our Premier subscribers!

This month's edition covers a wide range of topics from the fascinating world of aviculture, including softbills, budgies, finches and canaries, to bird feeding, birdwatching and much more.

Whether you are an experienced aviculturist, a backyard bird enthusiast or simply someone who loves learning more about our feathered friends, there is plenty to explore.

Thank you to all our Premier subscribers, supporters and readers for being part of the World Wide Birds community.

Your continued support makes it possible to keep sharing knowledge, promoting responsible bird keeping and creating spaces where birds and wildlife can thrive.

Together, we can make a difference – one bird, one plant and one garden at a time!

**Become a Premier Subscriber**

Finally, I would like to invite you to consider becoming a World Wide Birds Premier Magazine subscriber.

Your subscription does more than give you access to the additional Premier content. It also helps me continue working on the biodiversity projects for birds that I am currently developing.

These projects are becoming an increasingly important part of what I do — creating better habitats, providing food for birds, encouraging bird-friendly planting and finding practical ways to support biodiversity.

Every Premier subscription helps me take another step forward.

Thank you to everyone who continues to read, watch, share and support World Wide Birds. Whether you are a Standard reader, a Premier subscriber, a YouTube viewer, or someone who simply enjoys following the projects, I truly appreciate having you with me on this journey.

**Together, we can do something positive for birds.**

Happy birding!

**and to find the donation link.**

## Committee Against Bird Slaughter (CABS)

The Committee Against Bird Slaughter (CABS) is a charitable Non-Governmental Organisation working to protect migratory birds from illegal poaching and over exploitation.

They are an activist association with a lean administration based from our Head office in Bonn, Germany. They have no subdivisions and are a built on a coalition of supporter members who enable our work and volunteers who can react quickly, often in arduous circumstances. When rhey identify an issue, they don't set up working groups or commissions, they don't hold conferences - they simply take direct action! It is this approach which they have taken since CABS formation in 1975 and they have achieved a great deal.

**Your Donation Makes a Difference!**

Your donation will enable us to fund our campaigns and bird protection camps throughout Europe, to keep up the fight for migratory birds. CABS is almost exclusively financed with private donations, from nature and animal lovers, as well as foundations and nature conservation associations. In order to stay independent, we do not receive public funds and we refuse business sponsorships. CABS is recognised as non-profit, thus, donations are tax-deductible. For a donation of 25 € or more, you will receive a donation receipt at the beginning of the following year.

# MORINGA POWDER

## *For 'Bright & Healthy Living'*

Known as **Natures Miracle Tree**—the Powerhouse of nutritional value. This Super Food provides an easy way to deliver enormous benefits to your bird.

- Contains numerous Minerals, Amino Acids and Omega 3, 6 & 9.
- Contains numerous 45 anti-oxidants and 36 anti-inflammatory agents.
- High in Vitamin A, B1, B2, B3, B5, B6 and B12, Vitamin C, D, E and Vitamin K, Folic Acid and Biotin.

### Benefits of using Moringa:

- Helps protect the heart
- Helps maintain healthy cholesterol levels
- Anti-diabetic
- Anti-depressant
- Anti-inflammatory
- Anti-fungal
- Increases energy
- Improves vision

**Feed Moringa to young and adult birds daily all year round.**

**Directions of use:** Sprinkle Moringa Powder of fresh fruit and vegetables and soft foods or soaked seed.

## Lion's Ear (Leonotis leonurus)
## A Golden Welcome for Sunbirds

Southern Double-collared Sunbird (Cinnyris chalibeus) immature male foraging on flowers. Photo courtesy Wikipedia.

Let's give this indigenous South African beauty the recognition it deserves!

Some plants deserve a second look, and Lion's Ear is certainly one of them. Known widely as wild dagga, this beautiful indigenous shrub sometimes carries an unfortunate impression because of its common name.

Yet its true value in a bird-friendly garden has nothing to do with its reputation. Its real claim to fame is the abundance of nectar-rich flowers that welcome birds and pollinators into our gardens.

Perhaps it is time we started using the name Lion's Ear more often!

### Why Is It Called Lion's Ear?

The scientific name Leonotis leonurus gives us a clue. The name Leonotis comes from Greek words meaning "lion" and "ear", inspired by the shape and appearance of the flowers. Its striking orange blooms grow in rounded clusters along upright stems, creating a display that is both unusual and beautiful.

Although wild dagga remains a widely recognised common name, it should not overshadow the plant's wonderful contribution to South Africa's natural heritage. Lion's Ear is an indigenous species that deserves a place in gardens designed to support our wildlife.
A Natural Feeding Station for Birds

One of the greatest attractions of Lion's Ear is its abundant nectar. Its tubular, orange flowers are particularly appealing to nectar-feeding birds, especially sunbirds. Depending on which species occur in your area, you may be rewarded with visits from White-bellied, Southern Double-collared and other sunbirds.

Watching a sunbird move from flower to flower is a wonderful reminder of the relationship between indigenous plants and the wildlife that depends on them. As birds feed, they can transfer pollen between flowers, helping the plant reproduce.

The benefits do not stop with birds. Honeybees and other insects also visit the flowers, while the plant serves as a food plant for the caterpillars of the Bush Bronze butterfly. By growing Lion's Ear, you can help support several parts of your garden's ecosystem with one beautiful shrub.

A Gift to Your Garden Through the Seasons
Lion's Ear is a fast-growing, upright shrub that can reach approximately two to three metres in height. Its brilliant orange flowers provide colour for an extended period, often flowering from late summer into autumn and sometimes at other times of the year.

This is particularly valuable in a wildlife garden, where a succession of flowering indigenous plants can help provide food when other nectar sources are less plentiful.

The plant also adds height and structure to a garden. Use it as a backdrop to smaller indigenous plants, along a suitable fence, or as part of a sunny bird-friendly border. White-flowered forms are also available if you would like something a little different.

**Growing Your Own Lion's Ear**

The good news is that Lion's Ear is relatively easy to grow. Choose a sunny position and well-drained soil enriched with compost. Water it adequately while it establishes and during active growth, but avoid leaving its roots waterlogged. Once established, it is drought-tolerant and can cope with dry periods.

Allow sufficient room for the shrub to grow, and remember that a healthy, flowering plant will provide the greatest benefit to visiting wildlife.

As with any indigenous garden plant, choose a suitable species for your local conditions and avoid using pesticides that could harm visiting pollinators.

**Let's Celebrate the Plant, Not the Name**

A bird-friendly garden is about more than attracting birds to our doorsteps. It is about restoring small connections between plants, birds, insects and people.

Lion's Ear is a wonderful example of how one indigenous shrub can offer colour, nectar and ecological value. Rather than allowing the name wild dagga to define our perception of this plant, let us appreciate what it actually contributes to our gardens.

Plant Lion's Ear, welcome the sunbirds, support the pollinators, and help make every garden a little more wildlife-friendly.

AVICULTURE

# Assistance to breeding pairs at LPF

By: Rafael Zamora Padrón
Scientific Director
Loro Parque Fundación

Chicks of Bronze-winged Parrot
(Pionus chalcopterus) at LPF. M.Pérez/LPF

This year, in the breeding center of Loro Parque Fundación, has begun with the incipient reproduction of some species that usually start a few months later. This indicator responds to a particularly mild winter in terms of temperature, which on this occasion, have not been very low. The new pairs and those that were being prepared since the end of last summer, have given an immediate response to the stimuli offered.

Frequently the beginning of the year in the breeding centers of the world, at the beginning of the breeding season, give results of infertile eggs. Something that can be considered normal if the expemplars of each pair have not been able to stimulate each other correctly and in a synchronized way.

LOVEBIRDS

# Observations on Masked Lovebirds Agapornis Personata

By Kees and Wik van der Neut
For Avicultural Society of NSW.

Peach-faced Lovebird

We became the proud owners of a cock masked, but could not get hold of a hen, so placed it with some peach-faced hens. The result was three nests of hybrids, totalling 11, for which we found a good market.

By sheer luck we were able to obtain a hen and placed the pair in an aviary on their own measuring 7’ x 5’ x 6’. After supplying the pair with two nest boxes, 12” x 6” x 7” with a 2” diameter hole at one side, they were observed to carry coarse grasses to the nest, sometimes soaking pieces in the water tray and carrying them in the rump feathers.

# Avifood Products

By Dr. med. vet. Friedrich Janeczek,
Veterinary practice limited to Parrots,
Graefelfing, Germany

## How do you recognize well-fed young Hyacinth macaws?

It is well known that the quality and composition of the diet for young birds affect the condition of their feathers, skin and beak. This can be seen particularly well in young hyacinth macaws. Poorly and unbalanced nourished young Hyacinth macaws have blackish, dull plumage and pale, sometimes almost whitish skin around the eyes and the lower beak.

The young Hyacinth macaw pictured here is approximately 7 months old and not fully weaned. It has bright blue and shiny plumage and perfect toe skin without hyperkeratosis. Its skin around the eyes is an intense yellow color.

The parents of this bird are fed with Harrison's® High Potency coarse mixed with Palmgloss® and the Harrison's® Power Treats.

We congratulate our customer to this beautiful young macaw and wish continued success in the next breeding season!

These wonderful Hyacinth macaw progenies can be shipped to all countries which allow the import of captive bred CITES Appendix I species in F2 generation.

Both Hyacinth macaws can be exported in special transport boxes according to the IATA regulations accompanied with CITES export permit, veterinary health certificate and negative test results for avian influenza and Newcastle disease.

Interested persons who have the appropriate facilities to keep Hyacinth macaws should send an email to info@dr-janeczek.de.

The only disinfectant especially registered for the use on cage birds. Totally non-toxic to your birds and to yourself!

Tested and found to be highly effective against:

**Avian Influenza, Circovirus** ( Beak and Feather belong to this group of viruses), **Adenovirus, Paramyxovirus, Poxvirus, Herpesvirus** (Pacheco's disease virus belong to this group) **Coronavirus, Birnavirus**, Salmonella species, E.coli, Mycoplasma species, Clamydophila psittaci and fungi such as Aspergillus niger, Penicillium species and many more!

**Virukill Avian is the only product which is registered specifically for the use on and in birds.**

In birds, the killing of viruses by a disinfectant is of extreme importance, so use the product which has been specifically tested on and in birds and found to be effective against all of the pathogens, viruses, bacteria and fungi.

**Only Virukill Avian offer you this complete, safe and non-toxic disinfection!**

**NON-TOXIC – STABLE WHEN DILUTED – NON-CORROSIVE – REGISTERED with ATC 36 OF 1947 - BIODEGRADABLE – CAN BE SPRAYED WHILE BIRDS ARE IN THEIR CAGES- FRANGRANCE FREE – ECONOMICAL – NON-IRRITATING – NO RESIDUE**

**Together, we're sharing the beauty of Africa's birds with the world.**

# Help Keep the Feeders Full

Every day, birds visit the feeders looking for food, and every day I have the privilege of filming and sharing the beauty of Africa's birdlife with bird lovers around the world.

Keeping the feeders full is one of the biggest ongoing costs of the World Wide Birds project, but it also creates the magical moments that inspire people to appreciate and protect our wildlife.

If you enjoy my videos, magazine, website and educational birding content, please consider becoming a monthly Buy Me a Coffee supporter.

Your support goes directly towards purchasing bird food, keeping the feeders full, attracting more birds, and creating more opportunities to film and share Africa's incredible birdlife.

Thanks to the generosity of many wonderful supporters, this project continues to grow—and every new monthly supporter helps ensure the feeders remain busy, beautiful, and welcoming for the birds that visit.

Together, we're creating a place where birds can thrive while sharing their beauty with people across the world.

Thank you for being part of the World Wide Birds community. Every feeder filled, every bird filmed, and every story shared is possible because of your kindness and support.

Birds call for kindness.

**Monika's Mac Nuts**
**In Shell Premium Macadamia Nuts**
**100% Pesticide Free**
**Grown On The Big Island of Hawaii**

Our In Shell Mac Nuts are preferred by birds especially Hyacinth Macaws as well as people with a desire for a high quality, fresh tasting, nutritious nut.

Monika's Mac Nuts are grown on our family farm on the Big Island. Our Macadamia Nuts are preferred by Birds especially Hyacinth Macaws. Macaw birds love our Mac Nuts! Our Macadamia Nuts are also great for people who are on a raw food diet. Our Nuts are always naturally air dried…never cooked (cooking robs the nuts of flavor and nutrition). Our nuts are 100% pesticide free.

We sell our mac nuts in quantities starting as small as 1 lb up to over 100 lbs. We also offer a subscription program through our website https://www.mac-nuts.com/ where you can choose the quantity and frequency of your order.

# Marjoram for Birds:

## A Guide to Safe & Nutritious Feeding

BENEFITS AND SAFETY

SERVING SUGGESTIONS & RECIPES

### A Bird-Safe Mint Relative

Safe for parrots, cockatiels, lovebirds, chickens, and various wild bird species.

### Fresh Garden 'Chop' for Pets

Pulse leafy greens and vegetables, then stir in fresh marjoram for picky eaters.

### Nutritional & Mental Enrichment

Provides essential vitamins and minerals while offering mental stimulation through shredding fresh sprigs.

### Herbal Suet for Wild Birds

Mix lard, nut butter, and seeds with dried marjoram to attract inquisitive species.

### Safety and Moderation

Serve in moderation and ensure herbs are organic or thoroughly washed before feeding.

### Versatile Feeding Methods

Use fresh sprigs for nibbling or sprinkle dried Rakes over regular food "chop".

## FEEDING METHOD COMPARISON

| Method | Best For | Marjoram Form |
|---|---|---|
| Garden Chop | Pet Birds (Parrots, Finches) | Freshly chopped |
| Suet Cakes | Wild Backyard Birds | Dried flakes |
| Birdie Bread | Pet Birds | Baked-in seasoning |

**Infographic**
**Click to watch video.**

# A Fresh Treat:
## The Guide to Feeding Mint to Birds

### HEALTH BENEFITS & SAFE VARIETIES

**Natural Digestive & Immune Support**
Mint settles upset stomachs and provides essential Vitamins A, C, calcium, and phosphorus.

**Bird-Safe Varieties**

**Natural Pest Repellent**
Placing mint in nesting boxes helps deter mice, mites, and insects naturally.

### SERVING TIPS & SAFETY WARNINGS

**Interactive "Serving Suggestions"**
Offer "Mint Bouquets" for leaf-bathing or weave sprigs into toys for foraging.

**The "Toxic" Exception**
Avoid Pennyroyal (*Mentha pulegium*), as it is toxic to birds if ingested.

Avoid Pennyroyal (*Mentha pulegium*), as it is toxic to birds if ingested.

### QUICK-REFERENCE GUIDE: MINT PREPARATIONS

A quick-reference guide for safe vs. dangerous mint preparations.

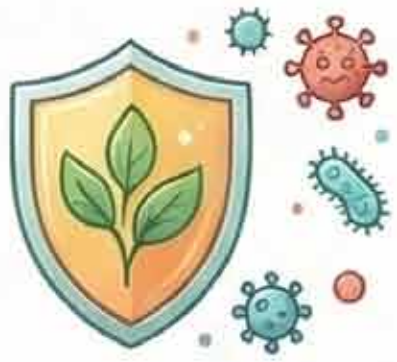

| Preparation | Safety Level | Action Required |
|---|---|---|
| Fresh Organic Leaves | SAFE | Wash thoroughly to remove pesticides. |
| Mint "Tea" (Infusion) | SAFE | Dilute significantly and cool completely. |
| Essential Oils / Extracts | DANGEROUS | Never use; toxic to respiratory systems. |

**Infographic**
**Click to watch video.**

# Oregano: A Natural Power-Herb for Birds

A safe, nutrient-dense perennial herb serving as a powerful natural supplement for avian health, supporting the respiratory and immune systems.

## The Healing Power of Oregano

### Natural "Infection Buster"

Contains thymol, providing strong anti-viral, anti-bacterial, and antiseptic properties for birds.

### Vital Respiratory & Immune Support

Effectively treats infections in the lungs, airways, and nose while strengthening immunity.

### Antioxidant & Anti-inflammatory

Provides essential nutritional value to help prevent disease and reduce inflammation.

## Serving and Growing Tips

### Versatile Feeding Methods

Administer as a tea, topical oil blend, or fresh chopped gnawing strips.

### Safe for All Caged Birds

Highly recommended for parrots, budgies, finches, and other common pet species.

### Easy Home Cultivation

Thrives in small window boxes or pots due to its small root system.

# IN PREMIER EDITION

CONSERVATION

## Can conservation finance itself? A Paraguayan enterprise is exploring new possibilities in the Atlantic Forest Part I

In Paraguay's Atlantic Forest, an enterprise called Tangará is testing whether sustainable local economies can strengthen long-term conservation and what happens when a conservation organization learns to run a business.

In southern Paraguay, that question takes shape within one of the last major remnants of the Upper Paraná Atlantic Forest, a landscape that, against all odds, still stands.

San Rafael is a Key Biodiversity Area that shelters 440 bird species, 7 of them found nowhere else in the region. It regulates water for downstream communities; stores carbon accumulated over centuries and provides habitat for species that have already lost most of their range elsewhere in the Atlantic Forest biome.

## Conservation in the Veterinary Clinic

By: LoraKim Joyner

I have been going to the Annual Conference of the Association of Avian Veterinarians (AAV) for 40 years, and I have seen so many changes in the status and practice of avian medicine, as well as in my beloved colleagues. My we are getting older! Still, so many of us old timers continue to contribute and mentor, and work hard to improve the welfare and care of birds.

One Earth Conservation's booth at the recent Association for Avian Veterinarians Annual Conference (L to R above: Lorelei D'Avolio, LoraKim Joyner, Josh Anderson)

During the last 40 years the conservation status of many parrot species has declined. Nearly one-third of the roughly 398 parrot species now face elevated risks of extinction, driven largely by human pressures that have intensified since the 1980s.

**Association for Wild-type and Exhibition Budgies of South Africa**

AWEBSA is the only National Body in Southern Africa catering for all budgerigars (Exhibition / Wild-Type / Pet Budgies) at our Shows. We also have an Open class where members and non-members show. Exhibition and Wild-Type budgerigars are treated on an equal footing with 25 colour awards each available per show.  We invite you to join us and enjoy our wonderful hobby with us.

## Frequently Asked Questions

**Can a budgie learn to talk?**

A pet budgie can learn a vast vocabulary of words and phrases. A male budgerigar is more inclined to speak than a female budgie.

Some pet budgie owners might not even realize that their budgie is repeating words or phrases because a budgie tends to have a very low, quick voice that might be mistaken for chatter.

When teaching your pet budgie, a word or phrase, speak slowly and clearly and keep an ear out for these words and phrases when you hear your budgie chattering away.

**What do I feed my pet budgie?**

Budgies are primarily vegetarians, although they often eat insects in the wild. In captivity, there are many ways to provide a budgie with a balanced diet. To be extra safe, however, you should always keep a mineral block in your budgie's cage. It will make up for anything that his regular diet may be lacking.

- Vegetables - Budgies enjoy a wide range of different vegetables including carrots, cucumbers, squashes, turnips, beetroot, corn on the cob, cauliflower and spinach.
- Grains - In the wild, budgies thrive off grass seeds. In captivity, grains like oats, whole rice, wild rice, white and jap millet and plain canary are all excellent options.
- Hazardous Foods - You should never give your budgie banana, avocado or chocolate, for example.

**My budgie is picking at his feathers. Is that normal?**

A budgie will normally preen his feathers daily, keeping them clean and free of dust. So you might see your budgie sliding his feathers through his beak, nibbling at his feathers, scratching his head with his claws, and fluffing up. This is all normal behaviour.

If you find your budgie is actually "yanking out" feathers repeatedly (or yanking out one of his flock mate's feathers) it's time to talk to a vet.

**Do they chew on things?**

Just look at the beak, hooked, and you should realize it is designed to chew. In the wild they use the beaks to excavate nest sites for example.

Budgies' beaks are always growing. To keep them from becoming overgrown, these birds enjoy shredding things up and chewing on things.

# MDS AFRICA

*ISO/IEC 17025 Accredited

## Avian DNA Specialists

***Use our secure ONLINE Sample Submission and Results Retrieval website*** ***vetsite.mdsafrica.net/login***

Some of our avian tests available:

- Avian sexing*
- Avian Polyoma Virus
- Chlamydophila psittaci
- Pachecos Disease Virus
- Psittacine Beak and Feather Disease Virus

All these tests can be performed on a single blood spot.

## SOUTH AFRICA AS A BIRDING HOTSPOT

Thanks to the abundance of excellent South African hotels and accommodation facilities, as well as an established transport infrastructure (including international car hire companies), South Africa is proving to be one of the world's top birding hotspots.

Visitors can join up with a formal birding tour group or can explore the country and its species on their own. Of the approximate 850 recorded bird species in the country, around 725 are resident birds (or, at least, annual visitors).

# STICKING TO OUR PROMISES.
# How We Help Promote Your Facebook Page.

When a business supports World Wide Birds by becoming a Premier magazine subscriber, we don't just say thank you — we look for ways to give something back.

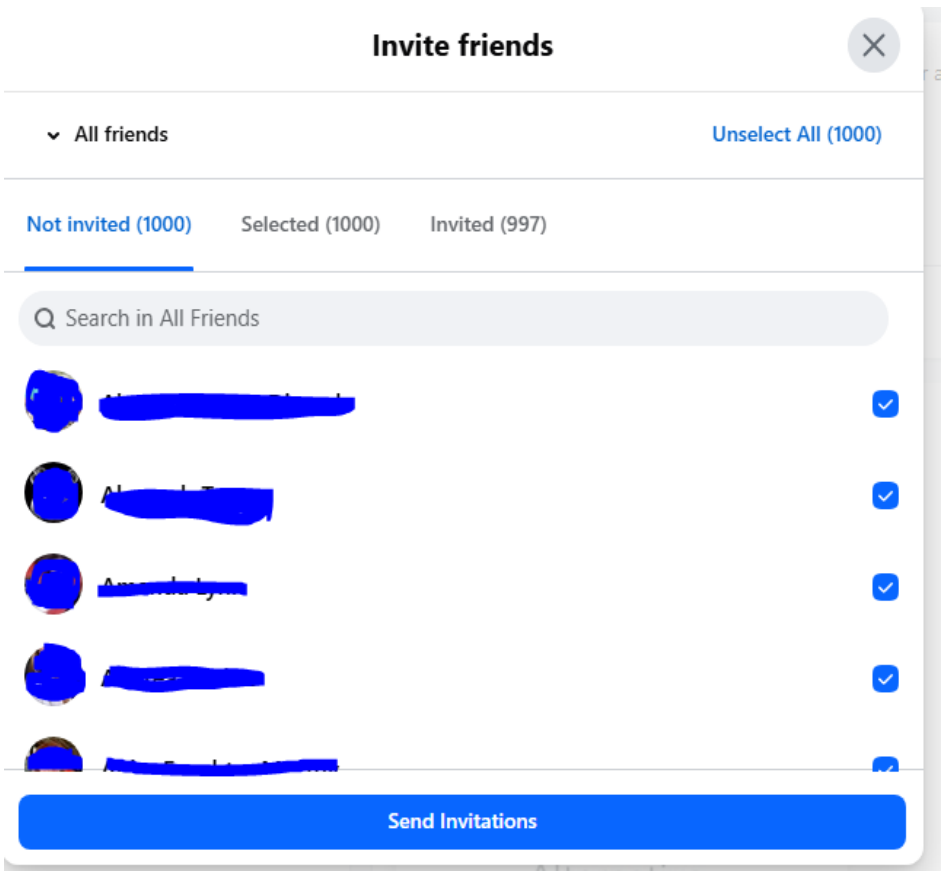

One of the ways we can help is by promoting your Facebook page to our own network of Facebook friends and followers.

**Here's a real example:**
Medpet South Africa is one of our valued supporters, and I recently invited my Facebook friends to visit and follow their Facebook page.

Response on 30 October 2026

**STEP 1 — We promote your page**
Names and profile photographs have been blurred to protect the privacy of our Facebook friends.

Invites as on 29 October 2026

I use my own Facebook network to introduce our Premier supporters to people who may have an interest in their products, services or organisation.

STEP 2 — People respond

WHAT DOES THIS MEAN FOR OUR PREMIER SUBSCRIBERS?
We believe that supporting World Wide Birds should provide value in return.
Your Premier subscription helps us continue producing the Standard and Premier editions of the magazine, creating bird-related videos and maintaining our website and other birding resources.

Your support helps us continue sharing the beauty, knowledge and diversity of birds with the world — and we want our supporters to receive something valuable in return.

Easy subscription link.
